
Loki

Quadbrid flagship IEM | Innovative bone conduction driver | Kinera self-developed strong magnetic 6mm DD | Knowles customized BA | Sonion composite EST driver | Effect Audio Cable | Hand painted IEM shell | Customized premium accessories

BACKGROUND

Loki, one of the Norse gods - the god of fire, mischief, and evil.

Loki is a giant born of the enemy of the gods. He is the son of the giant Fárbauti and Laufey, a giantess, and became a member of the Aesir gods in Asgard after becoming a blood brother of Odin.

He is handsome and charming, but also deceitful and capricious, possessing both good and evil qualities. He presides over fire, trickery, and lying. Due to his frequent mischiefs, he was disliked by the gods ,he was later imprisoned in a cave after murdering the God of Light Baldr and prevented his resurrection. Snake venom was dripped on his face daily, causing his once handsome face to become ugly and grotesque. It wasn't until the Ragnarok that he broke free and faced the guardian god Heimdallr in battle. Loki was defeated by Heimdallr, and both of them perished.

CAVITY DESIGN

VOLCANIC ERUPTION

Loki, the god of fire, has extraordinary strength due to his noble birth, and his mischievous character makes him a challenger to order, indirectly leading to the creation of "Ragnarok."

Kinera's designer uses fiery red lava to symbolize Loki, possessing the power of fire. The blue color symbolizes the surface of the earth. When Loki engages in mischief, accompanied by a volcanic eruption, the earth's crust cracks, and the hot magma flows and churns along the surface, shocking the energy of Asgard and heralding the arrival of a new era of world renewal.

TUNING CONCEPT

Balanced atmospheric sound style, with slightly prominent mid-range (vocals), solid and stable bass, abundant energy, detailed and delicate high-end, and a tidy soundstage. Suitable for pop, jazz, and small ensemble recordings.

SOUND CHARACTERISTICS

A flagship quadbrid unit earbud with outstanding detail performance that combines the characteristics of multiple acoustic drivers. It has good elasticity and clear, deep bass. The mid-range (vocals) has a strong sense of density and distinct layers, and the high-end is transparent, delicate, and well-extended, with delicate and rich overtones thanks to the electrostatic unit. The ultra-wide frequency response brings an expansive, transparent soundstage space.

DRIVER CONFIGURATION

FLAGSHIP COMBINATION, GRANDEUR EXPERIENCE
1DD 6BA 4EST 1BONE CONDUCTION DRIVER

1DD FOR BASS AND SUBBASS

One single 6mm dynamic driver is responsible for the low-frequency range. Kinera's custom-made 6mm liquid diaphragm dynamic driver has excellent acoustic performance. Combined with a reasonable acoustic structure design, it can deliver a very relaxed, natural low-frequency performance that is full and elastic.

4 MID RANGE BA + 2 TREBLE BA

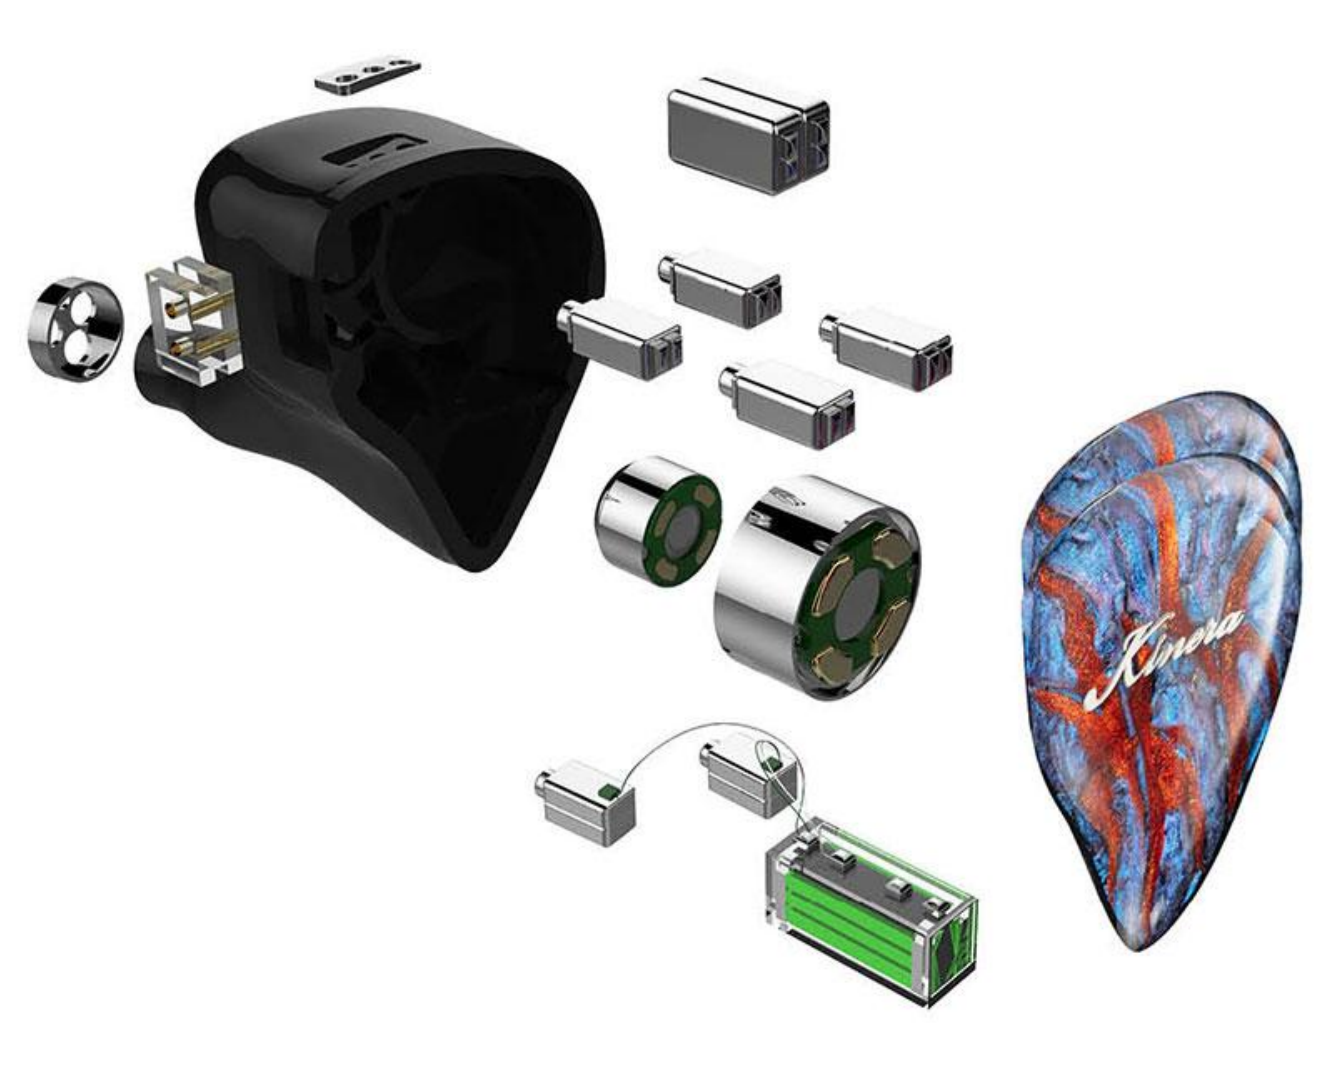
Six Knowles balanced armatures include four mid-range and two high-frequency drivers. Custom-tuned by Kinera, these Knowles balanced armatures are responsible for Loki's mid-range, with two additional Knowles balanced armatures connecting the mid and high frequencies via clever electronic and physical crossovers. Through fine tuning, they can handle both the natural low-frequency performance of the dynamic driver and the high-frequency advantage unique to electrostatic drivers, achieving a seamless integration of high, mid and low frequencies.

4 EST DRIVES FOR ULTRA HIGH FREQUENCY AND AIRINESS

Four electrostatic drivers are responsible for the ultra-high frequencies. One Sonion electrostatic driver works with four others to deliver Loki's ultra-high frequency range, utilizing the wider frequency range, better transient response, stronger detail performance, and brighter yet still smooth sound characteristics of electrostatic drivers to interpret Loki's sound. This results in extremely low distortion and a more realistic sound, bringing a bright and warm auditory experience.

1 BONE CONDUCTION DRIVER

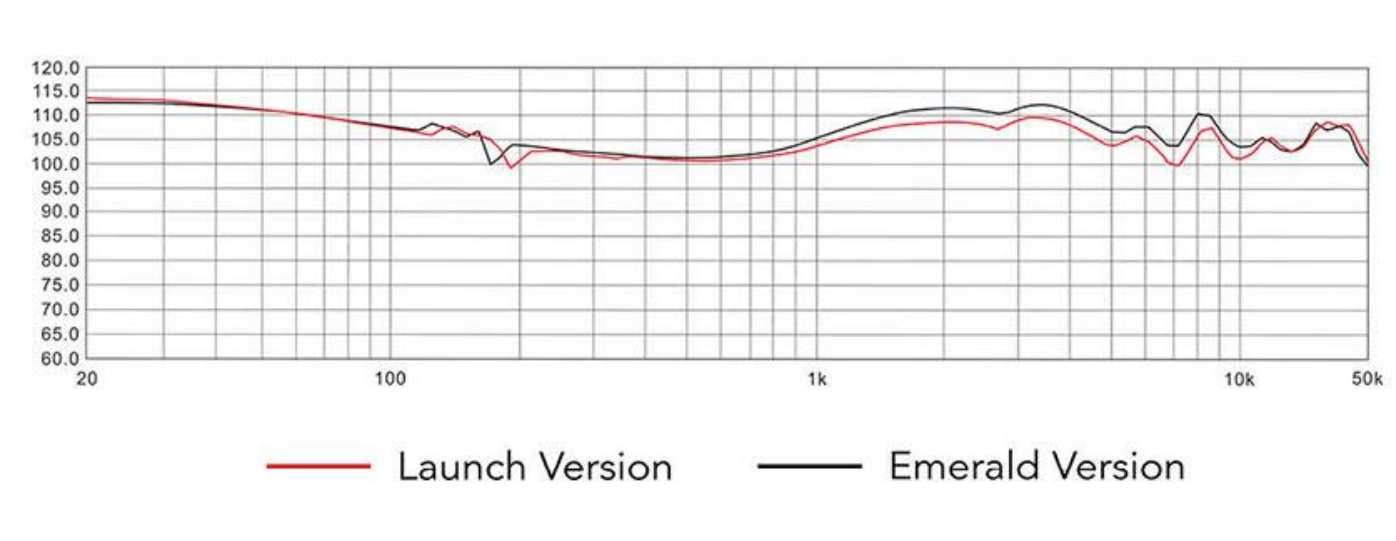
One bone conduction driver uses a contact-type bone conduction driver. Kinera's custom-made contact-type bone conduction driver works in tandem with the low-frequency dynamic driver, providing a deeper, ultra-low-frequency performance with a unique bass presentation, forming an almost bottomless dive.



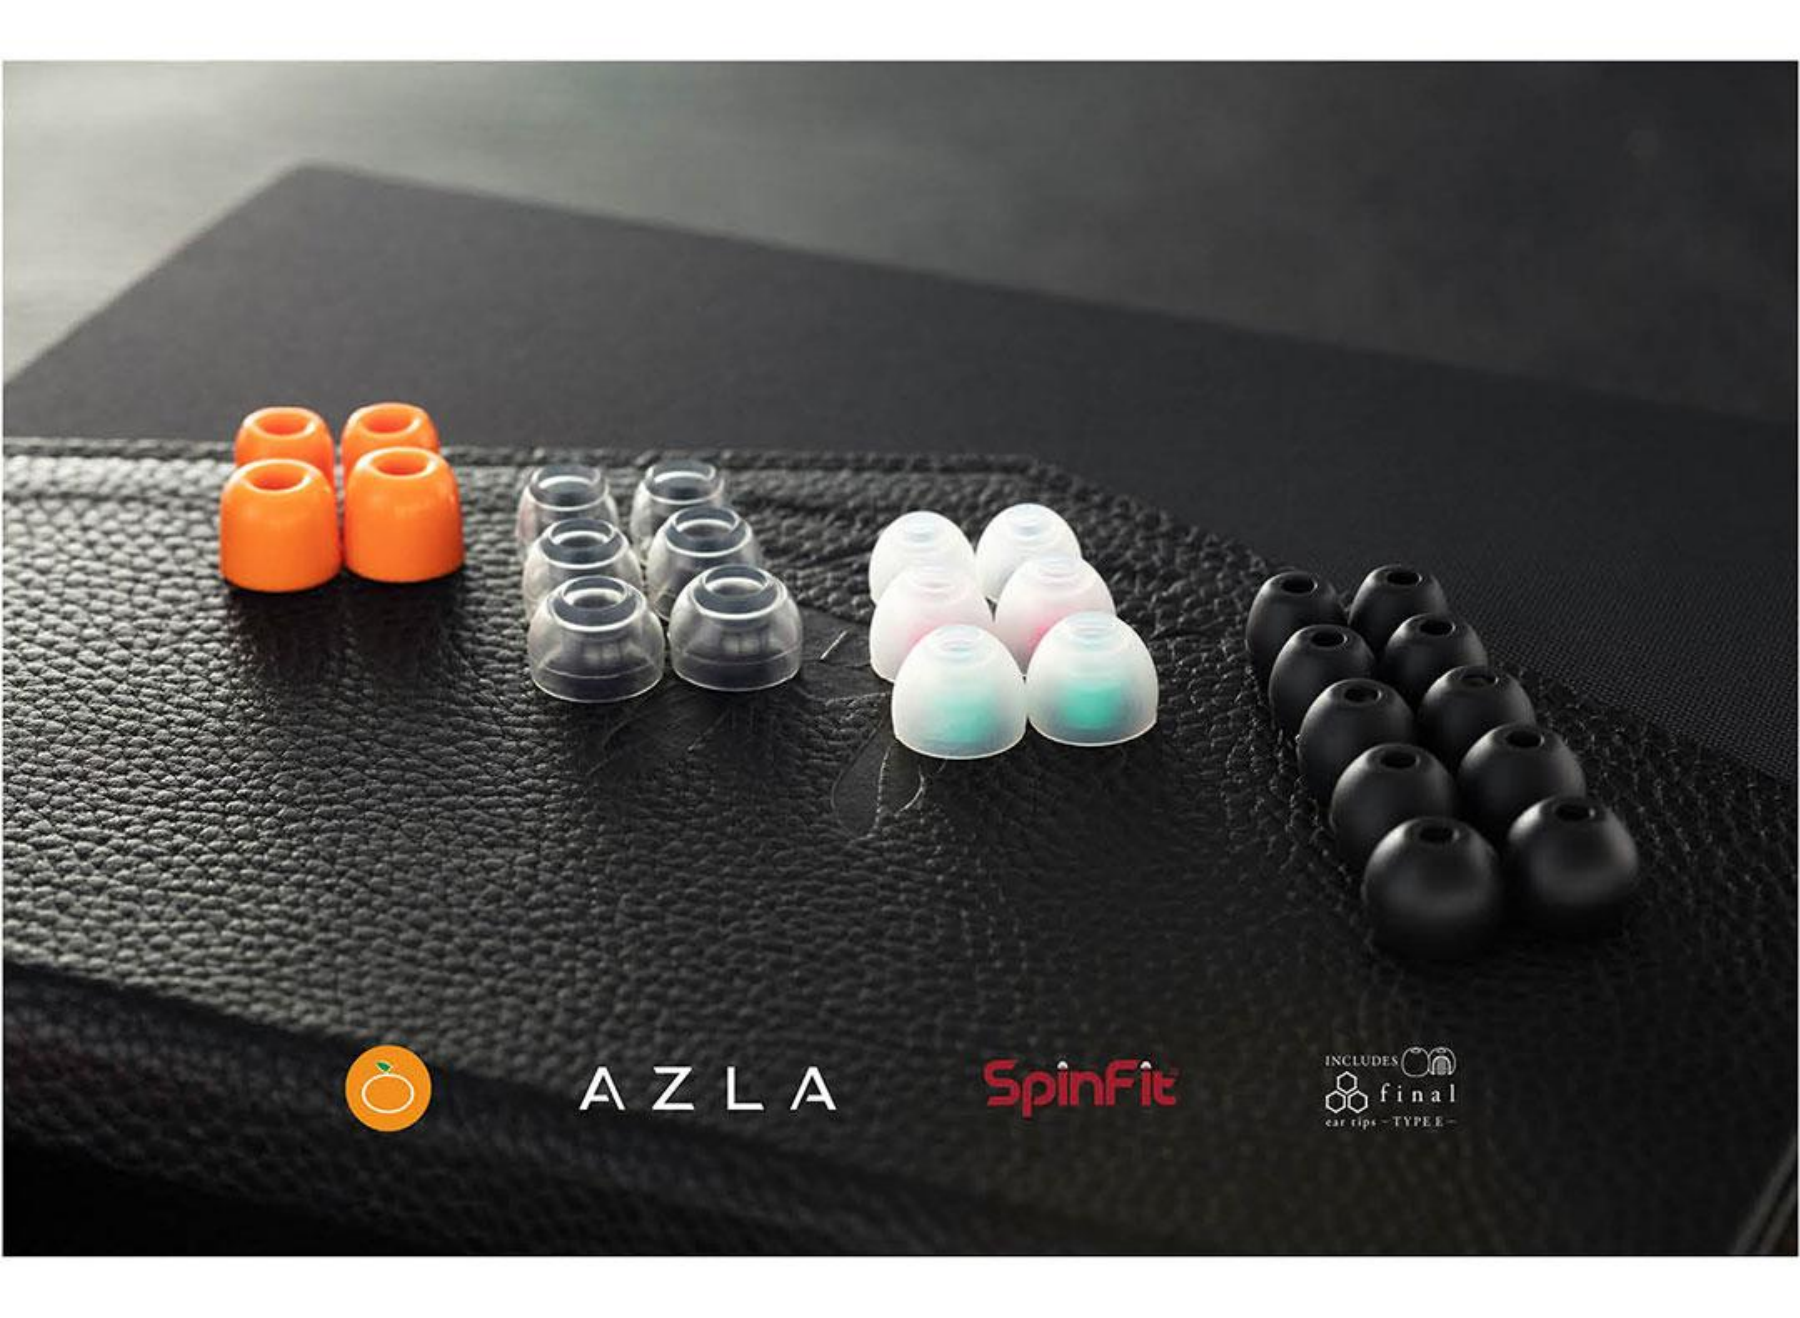
SPECIFICATION

Model	Imperial Loki
Impedance	12Ω
Sensitivity	107db
Wearing Type	In-Ear
Connector	0.78mm 2pin
Cable Length	1.2m (Detachable)
Driver	1DD+6BA+4EST+1BC
Frequency	20Hz-50kHz

FREQUENCY RESPONSE



The Loki Emerald Version offers a hint of brighter signature compared to the launch version, for Audiophiles who are into more energetic and ethereal musical experience



EARTIPS

MORE VERSATILE SOUND FOR YOUR CHOICE

Final Type E : Enhance bass response, minimize sibilance.

AZLA SednaEarfit Crystal : Balanced sound, comfortable listening, superior vocal texture, the bass is well-defined, and the high-end is transparent, making it extremely adaptable to music.

Spinfit CP145 : Excellent wearing comfort, bass performance is outstanding in terms of elasticity and depth.

Symbio F Foam : Absorb possible high-frequency harshness, resulting in full-bodied vocals and rich, deep bass.

EFFECT AUDIO

CABLE

Material : UP-OCC Pure Copper
Braiding : 4 cores three-dimensional braided
Cores : EPO* 24 AWG 4 cores
Structure : Proprietary dual geometric design
Connector : 0.78 2pin
Plug : EA 4.4mm Gold Plated
Sleeve : EA Ultra Flexi™ ultra-soft sleeve
Metal Part : Forged carbon fiber
Crafts : Polishing, brushing
Length : 1.2m

*EPO: Ergonomic Performance Optimization-designed with ergonomic performance optimization in mind, taking into account both the user experience and sound presentation to achieve the best design ratio for wire diameter and wire core.

The UP-OCC Pure Copper earphone cable has a sound signature that is rich in elastic low frequencies and warm vocals, making it suitable for listening to rock, pop, and country music genres.

Copper is a widely used metal material in headphone cables, and copper wire typically enhances the headphone's atmosphere and low-frequency response. Copper wire has good low-frequency extension and quantity. In different processes and applications of UP-OCC high-purity copper wire, it is particularly renowned for its rich atmosphere and has excellent adaptability for many types of headphones. It has the effect of smoothing out sound harshness and enhancing musicality.

ACCESORIES

- Kinera Imperial Loki In-Ear Monitor 1 pair
- Eartips 13 sets
  - Final Type E Tips x 5 sets (SS/S/M/L/LL)
  - AZLA SednaEarfit Crystal x 3 sets (SS/MS/ML)
  - Spinfit CP145 Tips x 3 sets (S/M/L)
  - Symbio F Foam Tips x 2 sets (S/M)
- Effect Audio Cable, EA 4.4mm x 1 pcs
- Genuine Leather Carry case x 1 pcs
- Cleaning Brush x 1 pcs
- User Manual x 1 pcs
- Thank You Card x 1 pcs
- Design Background Intro Card x 1 pcs
